Class : II B.E. (CSE)

Course Code: BCSF244P90

Course Name: OPERATING SYSTEM LAB

SRI CHANDRASEKHARENDRA SARASWATHI VISWA MAHAVIDYALAYA

(UNIVERSITY ESTABLISHED UNDER SECTION 3 OF UGC ACT 1956)

ENATHUR, KANCHIPURAM – 631 561

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

BONAFIDE CERTIFICATE

This is to certify that this is the bonafide record of work done by **Mr/Ms.** **POTHALA VENKATA SANDEEP**

with **Reg. No** **11249A290** of **II-B.E.(CSE)** during the academic year 2025 – 2026.

Station:Enathur

Date: 21-04-2026

Staff-in-charge **Head of the Department**

Submitted for the Practical examination held on _____ .

Examiner-1 **Examiner-2**

INDEX

SL. NO	NAME OF THE EXERCISE	DATE	PAGE NO	SIGNATURE
1	Installation of windows Operating System	13-02-26	-	
2	Practice the following Linux commands a. File and Directory Related Commands b. Process and Status Information Commands c. Text Related Commands d. File Permission Commands	13-02-26	1-3	
3	Execute a Shell Program a. To find the whether a Number is even or odd b. To find the biggest of two numbers c. To find the biggest of three numbers d. To find the factorial of a Number e. To display Fibonacci Series	20-02-26	4-6	
4	Practice the Linux Pipes and Filters commands a. Grep, b. Sed c. Awk commands	06-03-26	7	
5	Implement System Calls using C a. Stat() b. Wait() c. Getpid() d. Opendir(), readdir() e. Open(), Read(), Write()	13-03-26	8-10	
6	Implement Process Management a. Fork() b. Exec()	13-03-26	11-12	

7	Implement various CPU Scheduling algorithm using C a. FIFO b. Round Robin c. SJF	20-03-26	13-17	
8	Write C programs to avoid Deadlock using Banker's Algorithm	03-04-26	18-20	
9	Write C programs to implement the following Memory Allocation Methods a. First Fit b. Worst Fit c. Best Fit	03-04-26	21-25	
10	Install any guest operating system like Linux using VMware	03-04-26	-	

Exp:-02
Date:- 03-02-26 Practice linux commands.

a.) file and Directory Related commands.
these commands help you manage files & directories

P. venkata sandeep 1249R290

S. No.	Date	Title	Page No.	Teacher's Sign / Remarks
1	3/2/26	Installation of windows operating system		
2.)	03-02-26	Practicing linux commands		
3.	20-02-26	execute a shell program even(or) odd, Biggest two numbers, three numbers, factorial of a numbers, Fibonacci series.		
4.	06-03-26	Practice the linux pipes & filters commands. a.) grep. b. sed, c. Awk commands		
5.).	13-03-26	implement system calls using C. a.) start() b.) wait() c.) get pid() d.) opendir(), readdir() e.) open(), Read(), write.		
6.).	13-03-26	Implement Process managment a. fork() b. exec()		
7.).	20-03-26	Implement various cpu scheduling algorithm using C. a.) FIFO b.) Round Robin c.) SSF.		
8.)	03-04-26	write c Program.		

		do avoid. Dead lock. using Bankers Algo algorithm.
9.)	03-04-26.	write c programs to implement the following memory Allocation methods a.) first fit b.) worst fit. c.) Best fit.
10.)	03-04-26	Install any guest operating system like Linux using vmware.

Completed
Rohit
7/4/26

Date: 03-02-26 Practice linux commands.

a.) file and Directory Related commands.

These commands help you manage files & directories in the linux file system

→ ls - list directory contents.

Ex: ls → lists files and directories in the current directory.

- cd - change directory

Ex - cd /home/user/Documents → navigates to the Document folder.

→ Pwd - Print working directory

Ex - Pwd → shows the full path of your current directory

→ mkdir - make a directory

Ex - mkdir new_folder → creates a new folder named new_folder

→ rm - Remove files or directories.

Ex - rm file.txt → deletes file.txt

→ cp - copy files or directories.

→ mv - move or rename files or directory

ex - mv file.txt new file.txt.

→ touch - create an empty file or update the timestamp of a existing file

b.) Process & status information commands

→ Ps - Display current Process

→ Ex - PS → shows Process running under your current user.

→ top - Task manager (real-time view of system Process)

> kill - kill a Process by PID
ex : kill 1234 → terminates Process with PID
> df - Disk space usage
ex : df -h → shows disk space
> free - memory usage
> ex - free -h → show memory usage
> uptime - shows who is how long the system has been running
> ~~uptime~~ who - shows who is logged into the system
> Text Related commands,
> cat - concatenate display files
ex → cat file.txt
> more - view the content of files page-by-page
> less - view the content of files with scroll options.
> grep - search for text within files
ex : grep "error" log.txt
> wc - word count
ex : wc file.txt
> head - view the first few lines of a file
> tail - view the last few lines of a file
> tail -n10 file.txt
> sed - stream editor for text manipulation
> sed 's/old/new/g' file.txt
> awk - Pattern scanning and Processing Language

d. file permision commands
> chmod - change file Permissions.
ex : chmod 755 file.txt
> chown - change file ownership
> chgrp : change group ownership
> ex : chgrp group file.txt
> umask - set default file creation Permissions
> ex : umask 022
> stat : Display file (or) filesystem status
ex : stat file.txt

output:
Enter a number : 10
10 is even

output: Enter first number: 9
Enter second number: 6
9 is bigger

Ex. No. 3
Date : 20-02-26 Executing a shell Programs

a) To find wheather a Number is Even (or) odd

```
Read a no
echo "Enter a number"
read num
if [ $(($num %2)) -eq 0 ]; then
   echo "$num is Even"
else
   echo "$num is odd"
fi
```

b.) To find the biggest of Two numbers

```
echo "Enter first number"
read num1
echo "Enter second number"
read num2
if [ $num1 -gt $num2 ]; then
   echo "$num1 is the biggest"
elif [ $num1 -lt $num2 ]; then
   echo "$num2 is the biggest"
else
   echo "Both numbers are equal"
fi
```

c. To find the Biggest of Three numbers

```
echo "Enter first number"
read num1
echo "Enter second number"
```

Write a PHP program to find the factorial of a number.

Write a PHP program to display the first 10 Fibonacci numbers.

Write a PHP program to find the sum of digits of a number.

Write a PHP program to find the largest number among 3 numbers.

Write a PHP program to reverse a number.

Write a PHP program to check a number is prime or not.

Write a PHP program to check a number is palindrome or not.

Write a PHP program to check a number is Armstrong or not.

Write a PHP program to display the Fibonacci series using recursion.

Write a PHP program to find the factorial of a number using recursion.

Write a PHP program to find the number of digits in a number.

Output: Enter the number of terms: 7

Fibonacci of 7 is: 13

Write a PHP program to find the factorial of a number.

```
$f=1;
for ($i=1; $i<=$num; $i++)
{
    $f=$f*$i;
}
echo "Factorial of $num is $f";
```

Output: Enter the number: 5

Factorial of 5 is: 120

Write a PHP program to display the first 10 Fibonacci numbers.

```
$a=0;
```

output: ~~the Fibonacci series~~

~~for~~ enter no. of terms : 7

fibonacci series : 0 1 1 2 3 5 8

```
echo "Fibonacci Series."
for (((i=0; i<$terms ; i++))
do echo -n "$a"
next=$((a+b))
a=$b
b=$next
done
echo.
```

Result: the executing of shell program has done & output is verified.

Created with Photo-to-PDF One Click Converter. Download here: https://firehawk.ai/phototopdf
https://firehawk.ai/phototopdf/

output: enter file to search
first.txt
enter old_word
one
enter new word
an sandeep
the word 'one' has been replaced with
sandeep' in first.txt.

output: enter the filename:
first.txt

aim: Practice the linux Pipes & filter commands

a) grep:
```
echo "Enter the log file to search"
read filename
echo "enter search term"
read search_term
grep "$search_term" $filename
```

b) sed
```
echo "Enter the filename"
read filename
echo "Enter the word to replace"
read old_word
echo "enter the new word
read new_word
sed -i "s/$old_word/$new_word/g" $filename
echo "the word '$old_word' has been replaced
with '$new_word' in $filename
```

c) awk:
```
echo "Enter the filename"
read filename
awk '{print $1,$3}' $filename
```

Result: Practicing the linux Pipes & filter's commands & output is verified.

https://firehawk.ai/phototopdf/

output: child Process executing
child Process exiting
Parent resumed after child term

output: Process id: 3177
Parent id : 3134

2) wait() system call

```
#include <stdio.h>
#include <sys/types.h>
#include <unistd.h>
int main()
{
pid = +pid;
Pid = fork();
if (pid == 0) {
Printf("child Process executing \n");
sleep(5)
Printf("child Process exisiting \n");
}
else
{
wait(NULL);
Printf("Parent Process resumed after
child termination \n");
}
return 0;
}
```

3) get pid() system call

```
#include <stdio.h>
#include <unistd.h>
int main()
{
Printf("Process ID: %d \n", getpid
Printf("Parent Process ID: %d \n
getppid());
return 0;
}
```

https://firehawk.ai/phototopdf/

output :- m/c dir 2gd
contents of directory
one.txt, first.txt, evenash ...

a) opendir() and readdir() system calls.

```
#include <stdio.h>
#include <dirent.h>
int main (int argc, char* argv[])
{DIR *dir;
struct dirent* entry;
if (argc<2){
  Print ("usage: %s <directory path
  > /n", argv[0]);
  return 1;
}.
dir = opendir (argv[1]);
if (dir= NULL){
   Perror ("opendir").
   return 1;
}.
printf ("contents of directory: \n");
while ((entry= readdir (dir))!=NULL)
Print f ("%s\n" entry->d_name);

}
close dir (dir);
return 0;
}.
```

Result :- Implementation system calls using has been done & output is verified.

> kill - kill a Process by PID
ex : kill 1234 → terminates Process with PID
> df - Disk space usage
ex : df -h → shows disk space
> free - memory usage
> ex - free -h → show memory usage
> uptime - shows who is how long the system has been running
> ~~uptime~~ who - shows who is logged into the system
> Text Related commands,
> cat - concatenate display files
ex → cat file.txt
> more - view the content of files page-by-page
> less - view the content of files with scroll options.
> grep - search for text within files
ex : grep "error" log.txt
> wc - word count
ex : wc file.txt
> head - view the first few lines of a file
> tail - view the last few lines of a file
> tail -n10 file.txt
> sed - stream editor for text manipulation
> sed 's/old/new/g' file.txt
> awk - Pattern scanning and Processing Language

d. file permision commands
> chmod - change file Permissions.
ex : chmod 755 file.txt
> chown - change file ownership
> chgrp : change group ownership
> ex : chgrp group file.txt
> umask - set default file creation Permissions
> ex : umask 022
> stat : Display file (or) filesystem status
ex : stat file.txt

output:
Enter a number : 10
10 is even

output: Enter first number: 9
Enter second number: 6
9 is bigger

Ex. No. 3
Date : 20-02-26 Executing a shell Programs

a) To find wheather a Number is Even (or) odd

```
Read a no
echo "Enter a number"
read num
if [ $(($num %2)) -eq 0 ]; then
   echo "$num is Even"
else
   echo "$num is odd"
fi
```

b.) To find the biggest of Two numbers

```
echo "Enter first number"
read num1
echo "Enter second number"
read num2
if [ $num1 -gt $num2 ]; then
   echo "$num1 is the biggest"
elif [ $num1 -lt $num2 ]; then
   echo "$num2 is the biggest"
else
   echo "Both numbers are equal"
fi
```

c. To find the Biggest of Three numbers

```
echo "Enter first number"
read num1
echo "Enter second number"
```

Write a PHP program to find the factorial of a number.

Write a PHP program to display the first 10 Fibonacci numbers.

Write a PHP program to find the sum of digits of a number.

Write a PHP program to find the largest number among 3 numbers.

Write a PHP program to reverse a number.

Write a PHP program to check a number is prime or not.

Write a PHP program to check a number is palindrome or not.

Write a PHP program to check a number is Armstrong or not.

Write a PHP program to display the Fibonacci series using recursion.

Write a PHP program to find the factorial of a number using recursion.

Write a PHP program to find the number of digits in a number.

Output: Enter the number of terms: 7

Fibonacci of 7 is: 13

Write a PHP program to find the factorial of a number.

```
$f=1;
for ($i=1; $i<=$num; $i++)
{
    $f=$f*$i;
}
echo "Factorial of $num is $f";
```

Output: Enter the number: 5

Factorial of 5 is: 120

Write a PHP program to display the first 10 Fibonacci numbers.

```
$a=0;
```

output: ~~the Fibonacci series~~

~~for~~ enter no. of terms : 7

fibonacci series : 0 1 1 2 3 5 8

```
echo "Fibonacci Series."
for (((i=0; i<$terms ; i++))
do echo -n "$a"
next=$((a+b))
a=$b
b=$next
done
echo.
```

Result: the executing of shell program has done & output is verified.

output: enter number of blocks : 5
Enter size of each block:
100 500 200 300 600
Enter no. of Process : 4
Enter size of each Process
212 417 112 426

Process	size	Block
P1	212	2
P2	417	5
P3	112	2
P4	426	not allocated

2) Best fit Algorithm:

```
#include<stdio.h>
int main()
{
  int nb, np, i, j;
  int b[20], P[20], alloc[20];
  int min, Pos;
  Printf ("Enter number of blocks:");
  scanf ("%d", &nb);
  Printf ("Enter size of each block:\n");
  for (i=0; i<nb; i++)
      scanf ("%d", &b[i]);
  Printf ("Enter number of Processes:");
  scanf ("%d", &np);
  Printf ("Enter size of each Process:\n");
  for (i=0; i<np; i++)
      scanf ("%d", &p[i]);
  for (i=0; i<np; i++)
      alloc [i] = -1;
  for (i=0; i<np; i++) {
      min = 9999;
      Pos = -1;
      for (j=0; j<nb; j++){
          if (b[j] >= p[i] && b[j] < min)
          {
              min = b[j]
              Pos = j;
          }
          }
          if (pos != -1)
          {
              alloc [i] = pos;
```

https://firehawk.ai/phototopdf/

```
    b[pos]-=p[i];
  }
}
Printf("\nProcess\t size\t Block\n");
for (i=0; i<n p; i++){
    if (alloc[i] != -1)
        Printf ("p%d \t%d \t%d\n",
i+1, P[i], alloc[i]+1);
  else
    Printf ("p%d \tF%d \tnot Allocated
\n", i+1, P[i]);
}
return 0;
}
```

Result:- Implementing the memory Allocation methods has done & output is verified.
